

# From King's Dutch Academy of Sciences The Dutch Research Agenda

“Information technology (IT) now permeates all aspects of public, commercial, social, and personal life. bank cards, satnav, and weather radar... IT has become completely indispensable.”

“But to **guarantee** the **reliability** and **quality** of constantly **bigger** and more **complicated** IT, we will need to find answers to some **fundamental questions!**”

BRUNO MALLART

# Reduction of Complexity by Integration

By combining services such as telephony, television, data, and computing capacity within a single network, we can cut down on complexity, energy consumption and maintenance.

- How can we describe and analyze complex information systems effectively?
- How can we specify and measure the quality and reliability of a system?
- How can we combine various different systems?
- How can we design systems in which separate processors can co-operate efficiently via mutual network connections within a much larger whole?
- Can we design information systems that can diagnose their own malfunctions and perhaps even repair them?
- How can we specify, predict, and measure system performance as effectively as possible?

SNE addresses a.o. the highlighted questions!

# Mission SNE

*Can we create smart and safe data processing infrastructures that can be tailored to diverse application needs?*

- *Capacity*
  - *Bandwidth on demand, QoS, architectures, photonics, performance, GPU's*
- *Capability*
  - *Programmability, virtualization, complexity, semantics, workflows*
- *Security*
  - *Authorization, Anonymity, integrity of data in distributed data processing*
- *Sustainability*
  - *Greening infrastructure, awareness*
- *Resilience*
  - *Systems under attack, failures, disasters*

# GPU cards are disruptive!

# What Happens in an Internet Minute?

## And Future Growth is Staggering

There  
is  
always  
a  
bigger  
fish

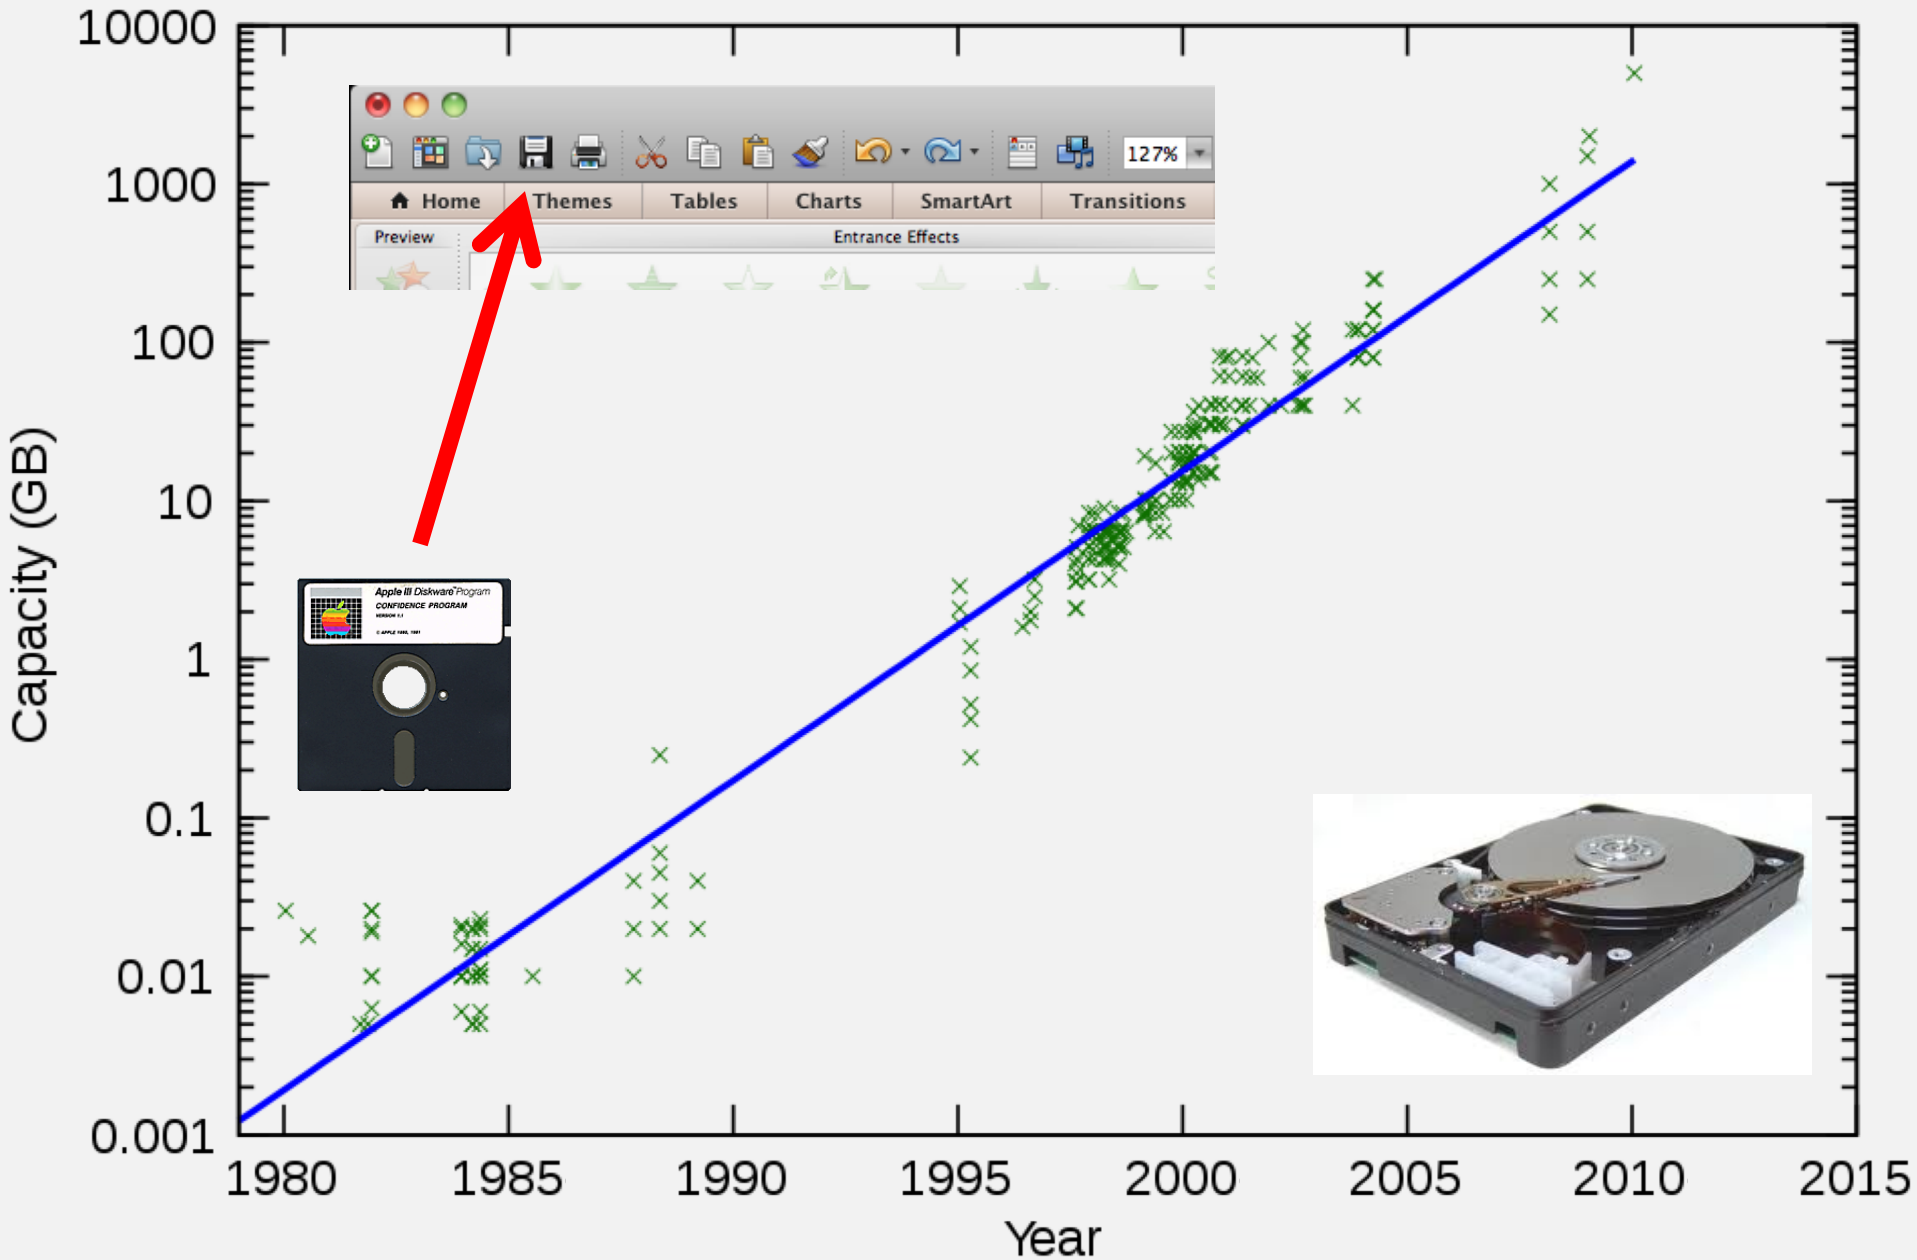

Size of data sets in terabytes

Business email sent per year	2,986,100	National Climactic Data Center database	6,144
Content uploaded to Facebook each year	182,500	Library of Congress' digital collection	5,120
Google's search index	97,656	US Census Bureau data	3,789
Kaiser Permanente's digital health records	30,720	Nasdaq stock market database	3,072
Large Hadron Collider's annual data output	15,360	Tweets sent in 2012	19
Videos uploaded to YouTube per year	15,000	Contents of every print issue of WIRED	1.26

# Data storage: doubling every 1.5 year!

# Reliable and Safe!

This omnipresence of IT makes us not only strong but also vulnerable.

- A virus, a hacker, or a system failure can instantly send digital shockwaves around the world.

The hardware and software that allow all our systems to operate is becoming bigger and more complex all the time, and the capacity of networks and data storage is increasing by leaps and bounds.

We will soon reach the limits of what is currently feasible and controllable.

## Performance Development

# Multiple colors / Fiber

**Wavelength Selective Switch**

Per fiber:  $\sim 80-100$  colors \* 50 GHz  
Per color: 10 – 40 – 100 – 200 ... Gbit/s  
BW \* Distance  $\sim 2 \cdot 10^{17}$  bm/s

**New: Hollow Fiber!**  
**→ less RTT!**

# Optical fibre submarine systems

# Undersea Cable System

A **cable landing station** may or may not be required, depending on whether, for example, the submarine cable requires power to power submarine repeaters or amplifiers. The voltages applied to the cables can be high **3,000 to 4,000 volts** for a typical trans-Atlantic telecommunications cable system, and 1,000 volts for a cross-channel telecommunications cable system. Submarine power cables can operate at many kilovolts: for example, the [Fenno-Skan power cable operates at 400 kV DC](#).

# Undersea Cable HV

Big and small flows don't go well together on the same wire! ☹

# The VM Turntable Demonstrator

The VMs that are live-migrated run an iterative search-refine-search workflow against data stored in different databases at the various locations. A user in San Diego gets hitless rendering of search progress as VMs spin around

# Experiment outcomes

> We have demonstrated seamless, live migration of VMs over MAN/WAN

> For this, we have realized a network service that  
Exhibits predictable behavior; tracks endpoints  
Flex bandwidth upon request by credited applications  
Doesn't require peak provisioning of network resources

> Pipelining bounds the downtime in spite of high RTTs

**San Diego – Amsterdam, 1GE, RTT = 200 msec, downtime  $\leq$  1 sec**

Back to back, 1GE, RTT = 0.2-0.5 msec, downtime =  $\sim$ 0.2 sec\*

*\*Clark et al. NSDI 05 paper. Different workloads*

> VM + Lightpaths across MAN/WAN are deemed a powerful and general alternative to RPC, GRAM approaches

> We believe it's a representative instance of active

# Alien light From idea to realisation!

## 40Gb/s alien wavelength transmission via a multi-vendor 10Gb/s DWDM infrastructure

### Alien wavelength advantages

- Direct connection of customer equipment<sup>[1]</sup> → cost savings
- Avoid OEO regeneration → power savings
- Faster time to service<sup>[2]</sup> → time savings
- Support of different modulation formats<sup>[3]</sup> → extend network lifetime

### Alien wavelength challenges

- Complex end-to-end optical path engineering in terms of linear (i.e. OSNR, dispersion) and non-linear (FWM, SPM, XPM, Raman) transmission effects for different modulation formats.
- Complex interoperability testing.
- End-to-end monitoring, fault isolation and resolution.
- End-to-end service activation.

In this demonstration we will investigate the performance of a 40Gb/s PM-QPSK alien wavelength installed on a 10Gb/s DWDM infrastructure.

### New method to present fiber link quality, FoM (Figure of Merit)

In order to quantify optical link grade, we propose a new method of representing system quality: the FOM (Figure of Merit) for concatenated fiber spans.

### Transmission system setup

JOINT SURFnet/NORDUnet 40Gb/s PM-QPSK alien wavelength DEMONSTRATION.

### Test results

### Conclusions

- We have investigated experimentally the all-optical transmission of a 40Gb/s PM-QPSK alien wavelength via a concatenated native and third party DWDM system that both were carrying live 10Gb/s wavelengths.
- The end-to-end transmission system consisted of 1056 km of TWRS (TrueWave Reduced Slope) transmission fiber.
- We demonstrated error-free transmission (i.e. BER below 10<sup>-15</sup>) during a 23 hour period.
- More detailed system performance analysis will be presented in an upcoming paper.

# Cyber security program

Research goal is to obtain the knowledge to create ICT systems that:

- model their state (situation)
- discover by observations and reasoning if and how an attack is developing and calculate the associated risks
- have the knowledge to calculate the effect of counter measures on states and their risks
- choose and execute one.

In short, we research the concept of networked computer infrastructures exhibiting SAR: Security Autonomous Response.

# Context & Goal

## Security Autonomous Response NETWORK Research

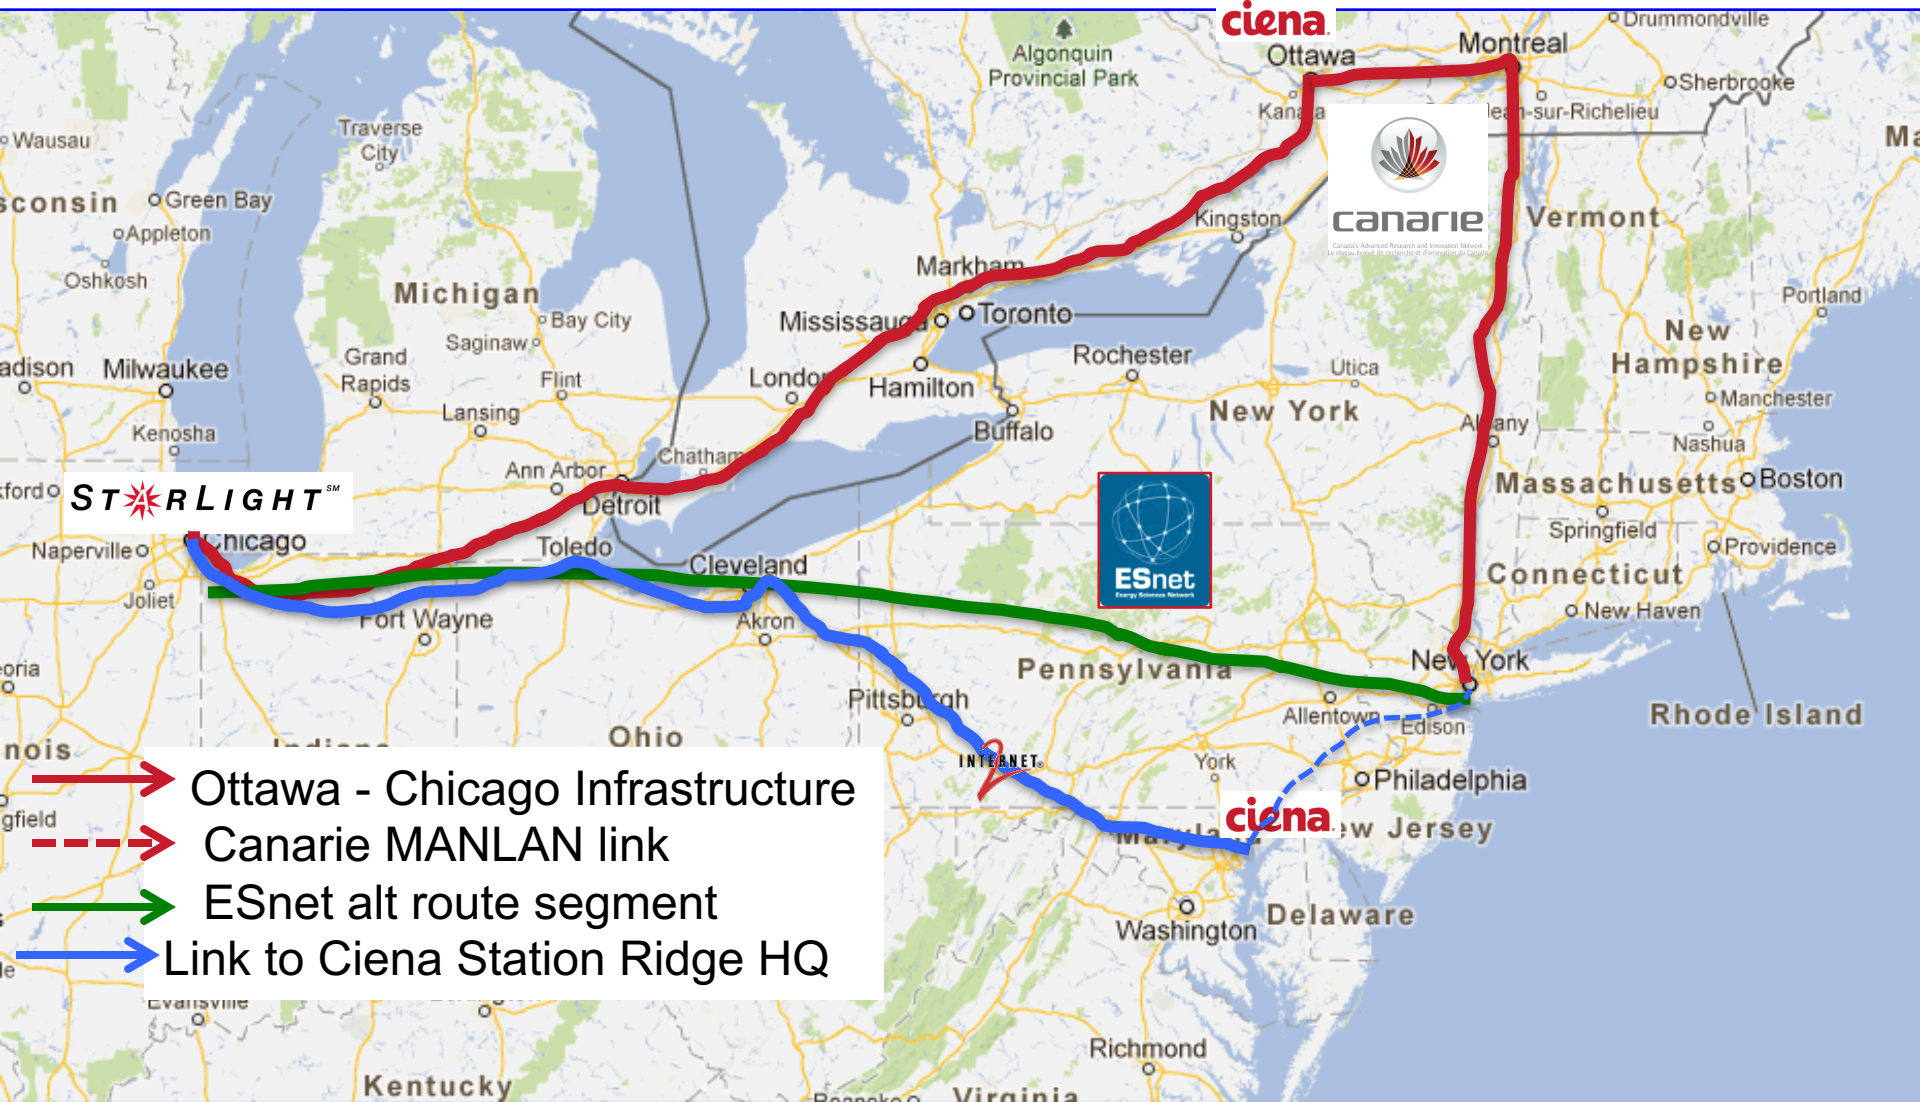

**Ameneh Deljoo (PhD):**  
Why create SARNET Alliances?  
Model autonomous SARNET behaviors to identify risk and benefits for SARNET stakeholders

**Stojan Trajanovski (PD):**  
Determine best defense scenario against cyberattacks deploying SARNET functions (1) based on security state and KPI information (2).

**Ralph Koning (PhD)**  
**Ben de Graaff (SP):**  
1. Design functionalities needed to operate a SARNET using SDN/NFV  
2: deliver security state and KPI information (e.g cost)

# Ciena's CENI topology

# CENI, International extension to University of Amsterdam

Research Triangle Project. Operation Spring of 2015

National Science Foundations ExoGENI racks, installed at UvA (Amsterdam), Northwestern University (Chicago) and Ciena's labs (Ottawa), are connected via a high performance 100G research network and trans-Atlantic network facilities using the Ciena 8700 Packetwave platform. This equipment configuration is used to create a computational and storage test bed used in collaborative demonstrations.

# Position of demo @ SC15

## Objective

- To get a better understanding for cyber attack complexity by visually defend a network suffering from basic volumetric attacks.
- To find a way to visualize future research in automated response.

## Demo highlights

- Pre-programmed attack scenarios that are able to show defense functions.
- Virtual sales + income from web services
- Defense cost

## DDoS Defence functions.

- Filtering
- Blocking
- Resource Scaling

# Basic operating system loop

The image shows a web browser window displaying a network simulation interface. The browser address bar shows `localhost:4567/vi/7`. The page content includes a list of netapps (provider, zone) and connections, a mode selection menu (info, info edge, draw, delete node, delete edge), and a configuration section for zones (eu-west-1a, eu-west-1b, eu-west-1c, ghl-1-a, gbl-1-b, us-east-1a, us-east-1b, us-east-1c, us-east-1d, us-west-2a, us-west-2b, us-west-2c, us-west-1a, us-west-1c, sa-east-1a, sa-east-1b, ap-northeast-1a, ap-northeast-1b, ap-southeast-1a, ap-southeast-1b). A central canvas displays a network graph with nodes labeled 13124, 13127, 13128, 13125, and 13126. A 'Create generator' section lists options for the number of vms and the preferential attachment algorithm. The terminal window shows the execution of `Dynamic[ResolveArticulationVertices[network]]` and `Dynamic[MyPlot[network]]`, resulting in a series of network graphs illustrating the evolution of the network structure.

# Service Provider Group framework

*A Service Provider Group (SPG) is an organisation structure providing a defined service only available if its members collaborate.*

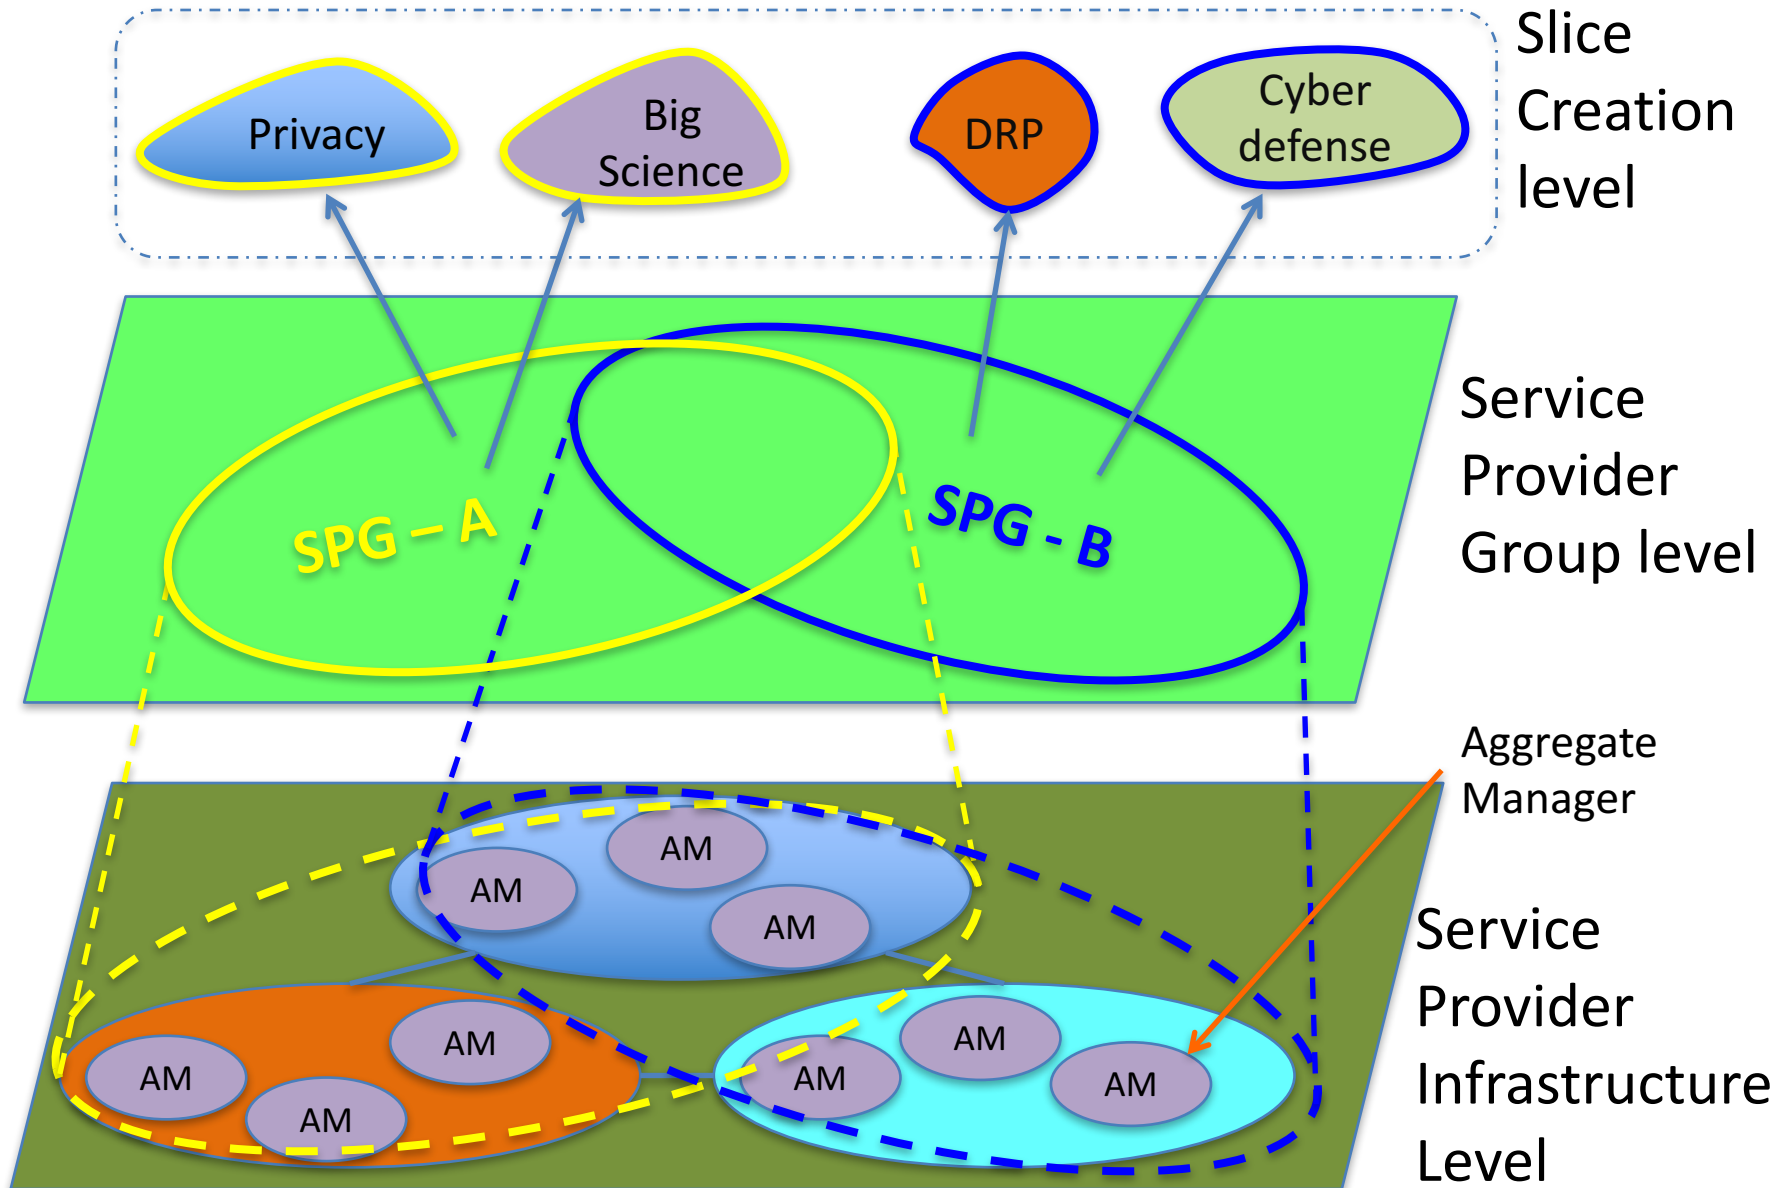

*Examples:*

Internet2NET+

Lisa Gammars

# Envisioned role of the SPG: define slice archetypes?

# Agent Based Modelling Framework

	Main component
Signal layer	Message / Act
Action layer	Action / Activity
Intentional layer	Intention
Motivational layer	Motive

In our model, we refer to four layers of components:

- the signal layer— describes **acts**, side-effects and failures showing outcomes of actions in a topology.
- the action layer—**actions**: performances that bring a certain result,
- the intentional layer—**intentions**: commitments to actions, or to build up intentions,
- the motivational layer—**motives**: events triggering the creation of intentions.

## TRANSLIGHT

### A GLOBAL-SCALE LAMBDAGRID FOR E-SCIENCE

*This global experiment wants to see if high-end applications needing transport capacities of multiple Gbps for up to hours at a time can be handled through an optical bypass network.*

Tom DeFanti, Cees de Laat, Joe Mambretti, Kees Neggers,  
Bill St. Arnaud.

Communications of the ACM, Volume 46, Issue 11  
(November 2003), Pages: 34 – 41.

<http://delaat.net/pubs/2003-j-6.pdf>

# Paper #1 + Q's

- Q1: This article is now 10 years old. Back then Twitter did not exist. What do you think will be the drivers for network capacity demand in Science and Society 10 years from now?
- Q2: List arguments why one would use photonic networks directly in science applications and arguments why not to use photonics directly but use current Internet.
- Q3: This question is not directly from this paper but fun to figure out via search on the web: Fiber cable systems under the ocean are very expensive and cost 100's of millions to put in place. How many fibers do they put in one cable and why that amount?

# Paper #2 + Q's

## Seamless Live Migration of Virtual Machines over the MAN/WAN

F. Travostino, P. Daspit, L. Gommans, C. Jog, C.T.A.M. de  
Laat, J. Mambretti, I. Monga, B. van Oudenaarde, S.  
Raghunath and P.Y. Wang

Future Generation Computer Systems, Volume 22,  
Issue 8, October 2006, Pages 901-907.

<http://delaat.net/pubs/2006-j-5.pdf>

# Paper #2 + Q's

- Q1: When migrating VM's as described in the paper, what are the related network connectivity challenges for the running VM's?
- Q2: Nowadays VM migration and load balancing are more or less standard in cloud environments. List a number of modern similar functionalities in current cloud providers and compare features among those and the method described in the paper.
- Q3: List a number of applications that could take advantage of the described migration methods. Do not only list what the paper described more than ten years ago before the word cloud was applied in the computer science, but take into consideration current technologies and trends, such as IOT, Smart City, autonomous driving cars,

# The constant factor in our field is Change!

The 50 years it took Physicists to find one particle, the Higgs,
