2 Employment

- **Faculty of Sciences, University of Amsterdam, The Netherlands, 4/1992-1/2025.**

Title: universitair docent (tenured assistant professor)

Research in goal-directed behavior, from geometrical considerations of state spaces. Development of mathematics of differential contact of bodies and quantitative mathematical morphology. Application of Clifford's geometric algebra in the computer sciences. Interested in accurate 3D reconstruction. Teaching of classes in robotics, autonomous systems, computer vision and linear algebra.

- **Industrial Research Limited, Auckland, New Zealand, 1/2010-5/2010**

Sabbatical with Robert Valkenburg on 3D reconstruction with geometric algebra.

Arizona State University, Phoenix, AZ, USA, 11/1998-4/1999.

Sabbatical with David Hestenes on geometric algebra in computer science.

- **Philips Laboratories, Briarcliff Manor, NY, USA, 9/1986-3/1992.**

Title: senior member research staff.

Initially developed a robot path planner based on distance transforms. Extended this to a general path planning method for autonomous devices and successfully demonstrated the theoretical and practical equivalence of robot path planning, car maneuvering, and solving Rubik's Cube like puzzles. The method led to 11 patent applications (and consequently only a few public papers). Implementation (in C and C++) of the method on a PUMA robot and a radio-controlled car that parks itself from any position (with others). Scientific and management responsibility for a group of 13 researchers (M.Sc. and Ph.D) in the programs "Sensory Integrated Robotics" and "Autonomous Systems". Work on theory of integration of sensing and motion for goal-directed systems.

- **FOM (Fundamental Research of Matter), Utrecht, The Netherlands, 3/1982-7/1986.**

Title: research scientist. Work performed at Technical University Delft.

Designing, building and implementing a system for the computer-guided automated analysis of interferograms. Detailed experience with commercial VME-based image processing modules. Responsible for acquiring the FOM (Dutch NSF) funding of this project. At the same time, research on the accuracy of measurements in digital images, leading to a Ph.D. thesis on digitized straight lines. Teaching of courses in signal processing and image analysis.

- **THDelft (Technical University Delft), Delft, The Netherlands, 2/1981-2/1982.**

Title: teaching assistant.

Designing and implementing a self-guided undergraduate course in digital image processing. Teaching of courses in signal processing and image analysis.

- **CERN (European Center for Nuclear Research), Geneva, Switzerland, 7/1980-9/1980.**

Title: summer student.
