

# System and Network Engineering Science in Amsterdam

## Smart Cyber Infrastructure.

Cees de Laat

# Science Faculty @ UvA

## Informatics Institute

- AMLAB: Machine Learning (Prof. dr. M. Welling)
- FCN: Federated Collaborative Networks (Prof. dr. H. Afsarmanesh)
- ILPS: Information and Language Processing Systems (Prof. dr. M. de Rijke)
- ISIS: Intelligent Sensory Information Systems (Prof. dr. ir. A.W.M. Smeulders)
- CSL: Computational Science Laboratory (Prof. dr. P.M.A. Sloot)
- SNE: System and Network Engineering (Prof. dr. ir. C.T.A.M. de Laat)
- TCS: Theory of Computer Science (Prof. dr. J.A. Bergstra)

# SNE - Staffing

*Group leader: prof. C. de Laat*

*Deputy group leaders: dr. Andy Pimentel, dr. Paola Grosso*

- 1 full prof (CdL)
- 2 part time professors
- 2 endowed professors
- 2 *senior researchers*
- 1 associate prof (AP)
- 4 assistant professors (inc PG)
- ~12 postdoc's
- *About 15 phd students*
- ~10 guests
  
- *Yearly turnover ~ 3,5 MEuro*

When top level guys look down they see only shit.

When bottom level guys look up they see only assholes.

# SNE - Mission

*Can we create smart and safe data processing infrastructures that can be tailored to diverse application needs?*

- *Capacity*
  - *Bandwidth on demand, QoS, architectures, photonics, performance*
- *Capability*
  - *Programmability, virtualization, complexity, semantics, workflows*
- *Security*
  - *Policy, Trust, Anonymity, Privacy, Integrity*
- *Sustainability*
  - *Greening infrastructure, Awareness*
- *Resilience*
  - *Failures, Disasters, Systems under attack*

# Reliable and Safe!

This omnipresence of IT makes us not only strong but also vulnerable.

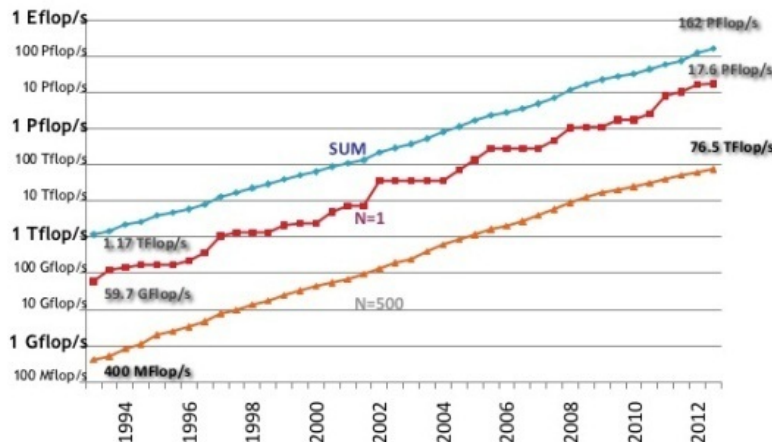

- A virus, a hacker, or a system failure can instantly send digital shockwaves around the world.

The hardware and software that allow all our systems to operate is becoming bigger and more complex all the time, and the capacity of networks and data storage is increasing by leaps and bounds.

We will soon reach the limits of what is currently feasible and controllable.

## Performance Development

## TNC2013 DEMOS JUNE, 2013

DEMO	TITLE	OWNER	AFFILIATION	E-MAIL	A-SIDE	Z-SIDE	PORTS(S) MAN LAN	PORTS(S) TNC2013	DETAILS
1	Big data transfers with multipathing, OpenFlow and MPTCP	Ronald van der Pol	SURFnet	ronald.vanderpol@surfnet.nl	TNC/MECC, Maastricht NL	Chicago, IL	Existing 100G link between internet2 and ESnet	2x40GE (Juniper)-2x10GE (OME6500)	In this demonstration we show how multipathing, OpenFlow and Multipath TCP (MPTCP) can help in large file transfers between data centres (Maastricht and Chicago). An OpenFlow application provisions multiple paths between the servers and MPTCP will be used on the servers to simultaneously send traffic across all these paths. This demo uses 2x40GE on the transatlantic 100G link. ESnet provides 2x40G between MAN LAN and StarLight, ACE and USLHCnet provide additional 10GEs.
2	Visualize 100G traffic	Inder Monga	ESnet	imonga@es.net					Using an SNMP feed from the Juniper switch at TNC2013 and/or Brocade AL25 node in MANLAN, this demo would visualize the total traffic on the link, of all demos aggregated. The network diagram will show the transatlantic topology and some of the demo topologies.
3	How many modern servers can fill a 100Gbps Transatlantic Circuit?	Inder Monga	ESnet	imonga@es.net	Chicago, Ill	TNC showfloor	1x 100GE	8x 10GE	In this demonstration, we show that with the proper tuning and test, only 2 hosts on each continent can generate almost 80Gbps of traffic. Each server has 4 10G NICs connected to a 40G virtual circuit, and has iperf3 running to generate traffic. ESnet's new 'iperf3' throughput measurement tool, still in beta, combines the best features from other tools such as iperf, netperf, and netperf. See: <a href="https://my.surfnet.nl/demos/tnc2013/">https://my.surfnet.nl/demos/tnc2013/</a>
4	First European ExoGeni at Work	Jeroen van der Ham	UvA	vdham@uva.nl	RENCI, NC	UvA, Amsterdam, NL	1x 10GE	1x 10GE	The ExoGENI racks at RENC1 and UvA will be interconnected over a 100 pipe and be on continuously, showing GENI connectivity between Amsterdam and the rest of the GENI nodes in the USA.
5	Up and down North Atlantic @ 100G	Michael Enrico	DANTE	michael.enrico@dante.net	TNC showfloor	TNC showfloor	1x 100GE	1x 100GE	The DANTE 100GE test set will be placed at the TNC2013 showfloor and connected to the Juniper at 100G. When this demo is running a loop @ MAN LAN's Brocade switch will ensure that the traffic sent to MAN LAN returns to the showfloor. On display is the throughput and RTT (to show the traffic travelled the Atlantic twice)

# Cyber security program

- Research goal is to obtain the knowledge to create ICT systems that:
  - model their state (situation)
  - discover by observations and reasoning if and how an attack is developing and calculate the associated risks
  - have the knowledge to calculate the effect of counter measures on states and their risks
  - choose and execute one.

In short, we research the concept of networked computer infrastructures exhibiting SAR: Security Autonomous Response.
