#### Exhaustivity through the maxim of Relation

Matthijs Westera

Institute for Logic, Language and Computation University of Amsterdam

LENLS, October 28th 2013

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

1. Had sp. believed John likes red, she should have said so.

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

1. Had sp. believed John likes red, she should have said so.

2. She didn't, so she lacks the belief that he likes red.

. . .

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

1. Had sp. believed John likes red, she should have said so.

- 2. She didn't, so she lacks the belief that he likes red.
- 3. She believes that he doesn't like red.

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

1. Had sp. believed John likes red, she should have said so.

- 2. She didn't, so she lacks the belief that he likes red. ... ('the epistemic step' - Sauerland, 2004)
- 3. She believes that he doesn't like red.

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

- 1. Had sp. believed John likes red, she should have said so.
- 2. She didn't, so she lacks the belief that he likes red. ... ('the epistemic step' - Sauerland, 2004)
- 3. She believes that he doesn't like red.

"[the epistemic] step does not follow from Gricean maxims and logic alone." - Chierchia, et al. (2008)

(1) Of red, green and blue, which colours does John like?
 He likes blue. → He doesn't like red, green.

#### Conversational implicature (Grice, 1975)

An implicature, the supposition of which is necessary for maintaining the assumption that the speaker is cooperative.

- 1. Had sp. believed John likes red, she should have said so.
- 2. She didn't, so she lacks the belief that he likes red. ... ('the epistemic step' - Sauerland, 2004)
- 3. She believes that he doesn't like red.

"[the epistemic] step does not follow from Gricean maxims and logic alone." - Chierchia, et al. (2008) Wrong, it does!

## 4.1. Main finding

- If we feed the maxims attentive content
- which we must anyway, to distinguish between (3b,3c) -
- then the epistemic step follows from the cooperative principle.

#### Take-home messages:

- Pragmatic reasoning is sensitive to attentive content.
- Exhaustivity implicatures are conversational implicatures.

Most existing work (since Mill, 1867):

Most existing work (since Mill, 1867):

1. The speaker lacks the belief that q

(Quantity)

Most existing work (since Mill, 1867):

The speaker lacks the belief that q
 ....

(Quantity)

3. She believes that  $\neg q$ 

Most existing work (since Mill, 1867):

- 1. The speaker lacks the belief that q
- 2. She believes either q or  $\neg q$

(Quantity) (Context)

3. She believes that  $\neg q$ 

Most existing work (since Mill, 1867):

- 1. The speaker lacks the belief that q
- 2. She believes either q or  $\neg q$

3. She believes that  $\neg q$ 

Most existing work (since Mill, 1867):

- 1. The speaker lacks the belief that q
- 2. She believes either q or  $\neg q$

3. She believes that  $\neg q$ 

#### Counterexample:

(5) I'm asking the wrong person, but which colours does J. like? He likes blue and red. → He doesn't like green.

Most existing work (since Mill, 1867):

- 1. The speaker lacks the belief that q
- 2. She believes either q or  $\neg q$

3. She believes that  $\neg q$ 

Counterexample:

(5) I'm asking the wrong person, but which colours does J. like? He likes blue and red. → He doesn't like green.

Instead, in my approach:

Opinionatedness follows from Quality + Relation implicatures

Existing approaches (since forever):

• 'Why did the speaker not say " $p \land q$ "?'

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Existing approaches (since forever):

• 'Why did the speaker not say " $p \land q$ "?'

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

• Mere ignorance is sufficient reason.

Existing approaches (since forever):

- 'Why did the speaker not say " $p \land q$ "?'
- Mere ignorance is sufficient reason.

My approach:

• 'Why did the speaker not say " $p \lor (p \land q)$ "?'

Existing approaches (since forever):

- 'Why did the speaker not say " $p \land q$ "?'
- Mere ignorance is sufficient reason.

My approach:

• 'Why did the speaker not say " $p \lor (p \land q)$ "?'

Ignorance is no excuse.

Existing approaches (since forever):

- 'Why did the speaker not say " $p \land q$ "?'
- Mere ignorance is sufficient reason.

My approach:

- 'Why did the speaker not say " $p \lor (p \land q)$ "?'
- Ignorance is no excuse.
- Hence something stronger is implied: exhaustivity.

Existing approaches (since forever):

- 'Why did the speaker not say " $p \land q$ "?'
- Mere ignorance is sufficient reason.

My approach:

- 'Why did the speaker not say " $p \lor (p \land q)$ "?'
- Ignorance is no excuse.
- Hence something stronger is implied: exhaustivity.

#### Beware:

- The 'alternatives' are fully determined by the maxims.
- Speakers need not reason in terms of alternatives.

## 4.4. Other suitable semantics

Attentive semantics is not the only suitable semantics:

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • 의 Q @</p>

Attentive semantics is not the only suitable semantics:

• Unrestricted Inquisitive Sem. (Ciardelli, 2009; Westera, 2012)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

Attentive semantics is not the only suitable semantics:

• Unrestricted Inquisitive Sem. (Ciardelli, 2009; Westera, 2012)

Minimally, the semantics must lack the absorption laws:

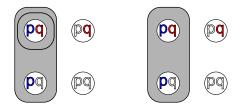

• Absorption:  $p \lor (p \land q) \equiv p \equiv p \land (p \lor q)$ 

Attentive semantics is not the only suitable semantics:

• Unrestricted Inquisitive Sem. (Ciardelli, 2009; Westera, 2012)

Minimally, the semantics must lack the absorption laws:

• Absorption:  $p \lor (p \land q) \equiv p \equiv p \land (p \lor q)$ 

▲ロト ▲帰 ト ▲ ヨ ト ▲ ヨ ト ・ ヨ ・ の Q ()

▲ロト ▲帰 ト ▲ ヨ ト ▲ ヨ ト ・ ヨ ・ の Q ()

• The semantics treats informative content classically.

- The semantics treats informative content classically.
- · Grice wouldn't be against other dimensions of meaning.

- The semantics treats informative content classically.
- Grice wouldn't be against other dimensions of meaning.

• The connectives are still algebraically 'basic'.

- The semantics treats informative content classically.
- Grice wouldn't be against other dimensions of meaning.

• The connectives are still algebraically 'basic'.

Besides: this is the only way.

## The end

Contact Matthijs Westera - m.westera@uva.nl

#### Article

 Attentive Pragmatics: Exhaustivity and the Final Rise. ESSLLI StuS proceedings (staff.science.uva.nl/~westera/)

Thanks to the *Netherlands Organisation for Scientific Research* (NWO) for financial support; to F. Roelofsen, J. Groenendijk, C. Cummins, K. von Fintel, the audiences of *SemDial, UCSC S-Circle, SPE6, ICL, ESSLLI StuS*, and many anonymous reviewers for valuable comments.

Appendix A. Semantics (Roelofsen, 2011)

#### Ingredients

- Possibility: a set of worlds (a, b)
- Proposition: a set of possibilities (A, B, [φ])
- Informative content:  $|\varphi| \coloneqq \bigcup [\varphi]$
- A restricted to b,  $A_b := \{a \cap b \mid a \in A, a \cap b \neq \emptyset\}$

#### Semantics of relevant fragment

1. 
$$[p] = \{\{w \in Worlds \mid w(p) = true\}\}$$

- 2.  $[\varphi \lor \psi] = ([\varphi] \cup [\psi])_{|\varphi| \cup |\psi|} = [\varphi] \cup [\psi]$
- 3.  $[\varphi \land \psi] = ([\varphi] \cup [\psi])_{|\varphi| \cap |\psi|}$

#### Entailment

A entails B,  $A \models B$ , iff (i)  $\bigcup A \subseteq \bigcup B$  and (ii)  $B_{\bigcup A} \subseteq A$ .

- 'My' Maxim of Relation:  $R_s \vDash Q$
- Roberts's relevance:  $R_{CG} \models Q$  (CG = Common Ground)

- 'My' Maxim of Relation:  $R_s \vDash Q$
- Roberts's relevance:  $R_{CG} \models Q$  (CG = Common Ground)

Roberts's requirement is too strong:

- 'My' Maxim of Relation:  $R_s \vDash Q$
- Roberts's relevance:  $R_{CG} \models Q$  (CG = Common Ground)

Roberts's requirement is too strong:

• The participants need not *already know* how *R* is relevant.

- 'My' Maxim of Relation:  $R_s \vDash Q$
- Roberts's relevance:  $R_{CG} \models Q$  (CG = Common Ground)

Roberts's requirement is too strong:

• The participants need not *already know* how *R* is relevant.

• They need only be able to *figure it out*.

- 'My' Maxim of Relation:  $R_s \vDash Q$
- Roberts's relevance:  $R_{CG} \models Q$  (CG = Common Ground)

Roberts's requirement is too strong:

- The participants need not *already know* how *R* is relevant.
- They need only be able to figure it out.

#### E.g., in case of exhaustivity:

- 1.  $s \subseteq |p|$
- 2. *s* ⊈ |*q*|
- 3.  $s \subseteq \overline{|p|} \cup |q|$  or  $s \subseteq \overline{|p|} \cup \overline{|q|}$

(Quality) (Quantity) (Relation)

4.  $s \subseteq \overline{|q|}$ 

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

#### The problem

The problem has never been the Gricean approach as such, but rather *to find the right 'alternatives'*.

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

#### The problem

The problem has never been the Gricean approach as such, but rather *to find the right 'alternatives'*.

In the present theory:

The maxims are sensitive to attentive content

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

#### The problem

The problem has never been the Gricean approach as such, but rather *to find the right 'alternatives'*.

In the present theory:

- The maxims are sensitive to attentive content
- Attentive content mirrors sub-sentential structure.

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

#### The problem

The problem has never been the Gricean approach as such, but rather *to find the right 'alternatives'*.

In the present theory:

- The maxims are sensitive to attentive content
- Attentive content mirrors sub-sentential structure.
- (Hence so do the 'alternatives'.)

Chierchia, et al. (2008), and much subsequent discussion

(6) Which books did every student read?Every student read O. or K.L. → No student read both.

#### The problem

The problem has never been the Gricean approach as such, but rather *to find the right 'alternatives'*.

In the present theory:

- The maxims are sensitive to attentive content
- Attentive content mirrors sub-sentential structure.
- (Hence so do the 'alternatives'.)

The 'embedded' implicature of (6) is in fact predicted.
